The bcl-2 family have both apoptotic act and the apoptosis blocking activity, bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. antisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders where prevention of cantisense constructs can be used in disorders.

The control of the bcl-2 protein (Rbcl-y). Rbcl-y and Hbcl-C y are homologues of the bcl-2 protein thought to be involved in the programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y component of the cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y component of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, component of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, component of the cell death pathway. If they act as cell death inhibitors, they may be cell death, aging, spinal cord injuries and amystrophic lateral sclerosis component of the spinal cord injuries and amystrophic lateral sclerosis component of the spinal cord injuries and amystrophic lateral sclerosis component of the spinal cord injuries and amystrophic lateral sclerosis component of the spinal cord injuries and supparent. They may also be used in this contrast, if they act as cell death stimulators, Rbcl-y and thel-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death can and hence control, parasites

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a novel human protein, bcl-w, encoded by the bcl -2 gene family and extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic

Disclosure; Page 37; 52pp; English

The present sequence is described of a derivative of human Bcl-w (see also AAY0533), a pro-survival member of the Bcl-2 family that is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities and determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, can induce intertility enhancing or otherwise facilitating spermatogenesis inducing, ls, or which

The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see MAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological possess no other major abnormalities as determined by histological including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a mammalian bcy-1 protein. The specification describes rat bcl-y protein (Rbcl-y) and human bcl-y protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein (Lbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein chought to be involved in programmed cell death (appetbois and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death conhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular confidence of the selection, vitally induced cell death, aging, spinal cord injuries and confidence of the selection, vitally induced cell death, aging, spinal cord injuries and confidence of the selection where cells under go premature cell death as a result of triggers which may or may not be apparent. They can also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding B-cell lymphoma-y protein - useful recombinant protein for use in treating uncontrolled cell

CC specification also describes human bcl-y protein (NDC1-y) and cpecification also describes human bcl-y protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of CC the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC - conditions where cells under go premature cell death as a result of CC - conditions where cells under go premature cell death as a result of CC injects which may or may not be apparent. They may also be used in this CC way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and CC Hbcl-y may be used to treat conditions associated with prolonged cell clife span such as cancer (especially kaposi's sarcoma and lung cancer) CC and auto/hyperimmune diseases. They may also be used to cause cell death con, and hence control, parasites

                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes rat bcl-y protein (Rbcl-y) and human bcl-y crotein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein CC thought to be involved in programmed cell death (apoptosis and necrosis). CC Rbcl-y and Hbcl-y proteins may be used to treat conditions associated CC with a disruption of the cell death pathway. If they act as cell death CC inhibitors, they may be used in therapies to treat subjects suffering CC from: strokes, head trauma, Alzheimer's Disease, neural and muscular CC degenerative diseases (especially multiple sclerosis), myocardial CC infarction, vitally induced cell death, aging, spinal cord injuries and CC amyotrophic lateral sclerosis- conditions where cells under go premature CC cell death as a result of triggers which may or may not be apparent. They CC may also be used in this way to develop cell lines which remain viable in CC culture for an extended period. In contrast, if they act as cell death CC with prolonged cell life span such as cancer (especially kaposi's sarcoma CC and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites

                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                The present sequence is described of a derivative of mouse Bcl-w (see called a hay05531), a pro-survival member of the Bcl-2 family that is widely expressed and which is essential for spermatogenesis. The derivative lacks the 24 N-terminal amino acids of Bcl-w. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one generated the human or murine bol-w gene (see hAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid

                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of the human Bcl-Rambo apoptotic transcription factor, particularly the BHNo domain. The sequences are useful in the treatment of diseases caused by incorrectly regulated intracellular signal transduction, including cancers, neurodegenerative diseases (e.g. Alzheimer's or Parkinson's diseases), muscular dystrophy, viral infections (including human immunodeficiency virus), autoimmune disease, septic shock, graft versus host disease and acute hepatitis. The present sequence is a protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cancer; neurodegenerative disease; Alzheimer's disease; cytostatic; nootropic; neuroprotective; antiparkinsonian; virucide; antiinflammatory; immunosuppressive; anti-HIV; antibacterial; hepatotropic; septic shock; Parkinson's disease; muscular dystrophy; HIV; viral infection; hepatitis;

                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products

/clome lib="NHIMGC_7"
/clome=Torgan: lung; Vector: pCTB7; Site 1: XhoI; Site 2:
EcoRI; cDNA made by oligo-dT priming. Directionally
cloned into EcoRI/XhoI sites using the following 5'
adaptor: GGCACGAG(G). Size-selected >500bp for average
insert size 1.8kb. Library constructed by Lim Hong in
the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-cDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies)."
